## Repeat Trial Results

Original WN sense definitions(make sure to click "Show Sense Numbers" under "Display Options"):  
<http://wordnetweb.princeton.edu/perl/webwn> (<http://wordnetweb.princeton.edu/perl/webwn>)

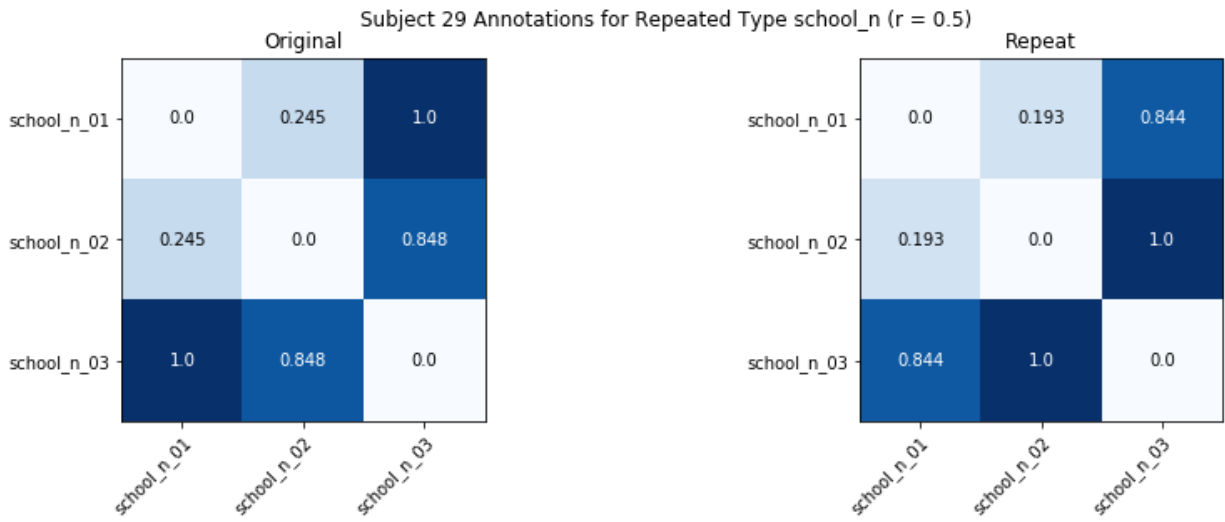

Distance matrices for when a subject got the same word (2x per trial). Spearman rank correlations between the subject's original and repeat trials are also recorded.

```
In [11]: 1 repeat_corr = plot_all_repeats(results, users)
```

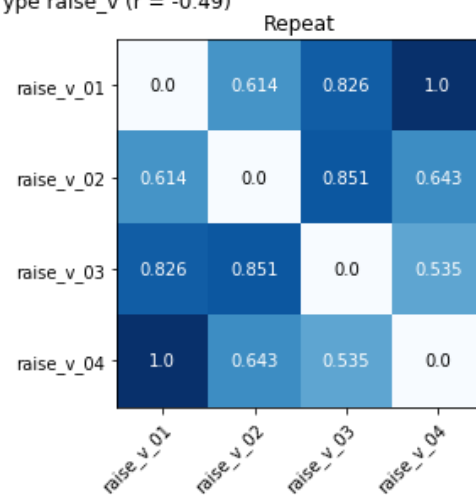

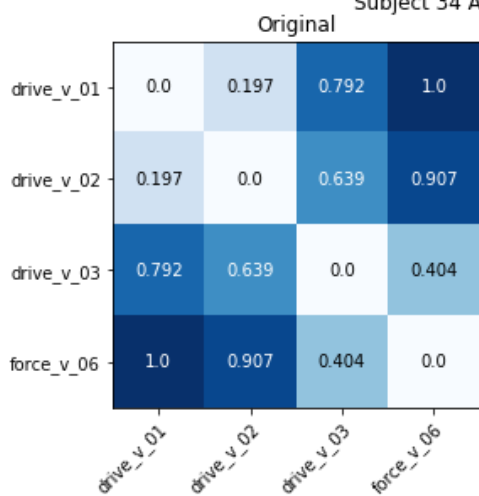

```
User 22 Correlation 0.45940746440938823

Shared Words

All subjects received a set of homonymous words. It appears there's some consistency in the results for foot, table, degree, and plane, but model and right were harder to distinguish.

```
In [12]: 1 plot_all_shared(results, users)
```

Spearman rank correlations between one subject's data and the average of the rest of the subjects

```
In [13]: 1 shared_results = results[results['trialType'] == 'shared']
         2 shared_corrs = group_consistency(shared_results, users)
```

## MDS for Shared Trials

```
In [113]: 1 all_shared_defs = display_sense_definitions(results, 'shared')
```

```
In [114]: 1 plot_individual_mds(results, 'foot_n', 'shared', users, db, all_shared_
```

Out[114]:

	Sense	Type	Definition
212	foot_n_01	foot_n	the part of the leg of a human being below the ankle joint
213	foot_n_02	foot_n	a linear unit of length equal to 12 inches or a third of a yard
214	foot_n_03	foot_n	the lower part of anything

```
In [115]: 1 plot_individual_mds(results, 'table_n', 'shared', users, db, all_shared
```

Out[115]:

	Sense	Type	Definition
215	table_n_01	table_n	a set of data arranged in rows and columns
216	table_n_02	table_n	a piece of furniture having a smooth flat top that is usually supported by one or more vertical legs
217	table_n_03	table_n	a piece of furniture with tableware for a meal laid out on it

```
In [116]: 1 plot_individual_mds(results, 'plane_n', 'shared', users, db, all_shared
```

Out[116]:

	Sense	Type	Definition
218	airplane_n_01	plane_n	an aircraft that has a fixed wing and is powered by propellers or jets
219	plane_n_02	plane_n	(mathematics) an unbounded two-dimensional shape
220	plane_n_03	plane_n	a level of existence or development

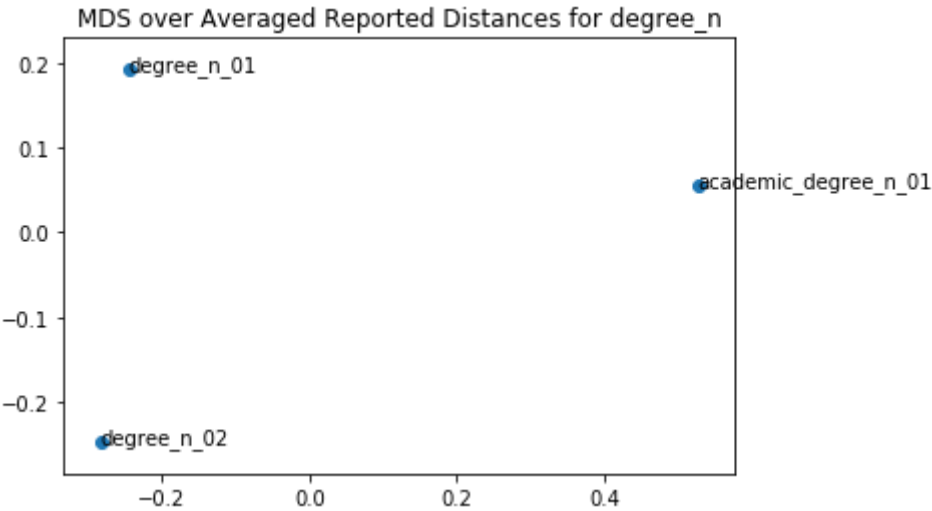

In [117]:

1 plot\_individual\_mds(results, 'degree\_n', 'shared', users, db, all\_share

Out[117]:

	Sense	Type	Definition
221	academic_degree_n_01	degree_n	an award conferred by a college or university signifying that the recipient has satisfactorily completed a course of study
222	degree_n_01	degree_n	a position on a scale of intensity or amount or quality
223	degree_n_02	degree_n	a specific identifiable position in a continuum or series or especially in a process

```
In [118]: 1 plot_individual_mds(results, 'right_n', 'shared', users, db, all_shared)
```

Out[118]:

	Sense	Type	Definition
224	right_n_01	right_n	an abstract idea of that which is due to a person or governmental body by law or tradition or nature; ; - Eleanor Roosevelt
225	right_n_02	right_n	location near or direction toward the right side; i.e. the side to the south when a person or object faces east
226	right_n_04	right_n	those who support political or social or economic conservatism; those who believe that things are better left unchanged

```
In [119]: 1 plot_individual_mds(results, 'model_n', 'shared', users, db, all_shared
```

Out[119]:

	Sense	Type	Definition
227	model_n_01	model_n	a hypothetical description of a complex entity or process
228	model_n_02	model_n	a type of product
229	model_n_03	model_n	a person who poses for a photographer or painter or sculptor

## Consistency Metrics

```
In [36]: 1 user_time_word_changes = get_time_and_changes(results, user_df)
2 consistency = pd.DataFrame({'Group Consistency': shared_corrs, 'Self Co
3 corrs = user_time_word_changes.merge(consistency, on = user_time_word_c
4 corrs['Correlation with SN'] = my_correlations(participants, trials, re
5 corrs
```

Out[36]:

	userID	timeTaken	changes	Group Consistency	Self Consistency	Correlation with SN
0	-M3pVTw9ili6muvdZKg4	546.814	5	-0.027330	0.459407	0.328158

8	-M4WPYQVe_g2Cz7JGkvf	380.887	3	-0.233355	0.367647	-0.276231

**timeTaken:** Duration of experiment for each user (in seconds)

**Changes:** Number of times a subject changed the existing layout (benefit of grid layout over similarity judgements)

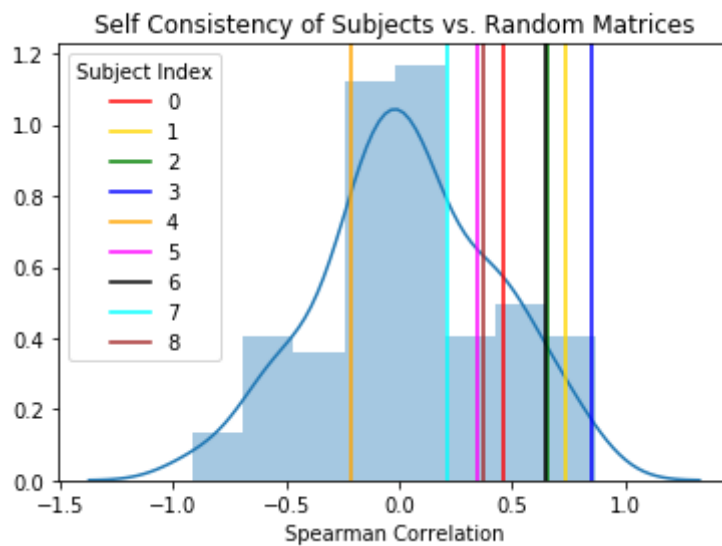

**Group Consistency:** Hold one out correlation on shared trials (taken from above results). Spearman rank correlation with subject's matrix and the average of all the other subjects' matrices.

**Self Consistency:** Spearman rank correlation over the two repeated words a participant received

**Correlation with SN:** The leftmost column in the dataframe is the Spearman rank correlation with my results, which would be the closest thing we have to ground truth data. For all the shared words, my correlation with the average was 1 for plane.n, degree.n, foot.n, and table.n, and 0.5 for right.n and model.n.

We replicate the self and group consistency metrics with matrices initialized for 100 random subjects.

```
In [54]: 1 random_self = simulate_self_correlation(100, db)
2 plot_consistency_hist(random_self, corrs['Self Consistency'],
3                        "Self Consistency of Subjects vs. Random Matrices"
```

```
In [50]: 1 random_group = [random_vs_all(shared_results) for _ in range(100)]
2 plot_consistency_hist(random_group, corrs['Group Consistency'],
3                        "Group Consistency of Subjects vs. Random Matrices"
```
